S. TURNER, ed.

CAUSALITY

4 vols.

2010 — 1704 pp.

Oferta de lanzamiento hasta 15.03.2010 €629,00

Después €755,00

ÍNDICE: Volume 1: L. A. Quetelet: On the study of causes — J. F. W. Herschel: Quetelet on probabilities — J. Venn: Causation — J. Bertillon: Mariage — K. Pearson: The scientific law — K. Pearson: Cause and effect-probability — K. Pearson: Contingency and correlation—the insufficiency of causation — G. U. Yule: On the correlation of total pauperism with proportion of out-relief — G. U. Yule: An investigation into the causes in pauperism in England, chiefly during the last two intercensal decades — G. U. Yule: Partial association — **Volume 2:** H. L. A. Hart / T. Honoré: The generalizing theories: adequate cause — G. Calabresi: Concerning cause and the law of torts — R. W. Wright: Causation in tort law — H. A. Simon: Causal ordering and identifiability — H. A. Simon: Spurious correlation: a causal interpretation — H. M. Blalock, Jr.: Correlation and causality: the multivariate case — H. Hyman: The introduction of additional variables and the problem of spuriousness — H. Hyman: The Introduction of additional variables and the elaboration of analysis — A. B. Hill: The environment and disease: association or causation? — C. W. J. Granger: Investigating causal relations by econometric models and cross-spectral models — C. W. J. Granger / P. Newbold: Spurious regressions in econometrics — C. W. J. Granger: Testing for causality: a personal viewpoint — P. W. Holland: Statistics and causal inference — D. B. Rubin: Statistics and causal inference: comment: which ifs have causal answers? — D. R. Cox: Statistics and causal inference: comment — C. Glymour: Statistics and causal inference: comment: statistics and metaphysics — C. Granger: Statistics and causal inference: comment — P. W. Holland: Statistics and causal inference: rejoinder — P. W. Holland: Causal inference, path analysis, and recursive structural equations models — R. A. Fisher: Dangers of cigarette smoking

— R. A. Fisher: Cigarettes, cancer, and statistics — R. A. Fisher: The nature of probability — R. A. Fisher: Lung Cancer and cigarettes — R. A. Fisher: Cancer and smoking — R. A. Fisher: Inhaling — C. C. Spicer: Review — J. J. Heckman: Sample selection bias as a specification error — J. J. Heckman/J. V. Hotz: Choosing among alternative nonexperimental methods for estimating the impact of social programs: the case of manpower training — P. W. Holland: Choosing among alternative nonexperimental methods for estimating the impact of social programs: the case of manpower training: comment — R. Moffitt: Choosing among alternative nonexperimental methods for estimating the impact of social programs: the case of manpower training: comment — J. J. Heckman/J. V. Hotz: Choosing among alternative nonexperimental methods for estimating the impact of social programs: the case of manpower training: rejoinder — **Volume 3:** J. Pearl: Graphs, causality, and structural equation models — S. Greenland & al.: Confounding and collapsibility in causal inference — J. Pearl: Causal diagrams for empirical research — D. A. Freedman: Graphical models for causation, and the identification problem — L. A. Goodman / W. H. Kruskal: Measures of association for cross classifications — L. A. Goodman: Simple models for the analysis of association in cross-classifications having ordered categories — L. A. Goodman: The multivariate analysis of qualitative data: interactions among multiple classifications — L. A. Goodman: The Analysis of cross-classified data: independence, quasi-independence, and interactions in contingency tables with or without missing entries — P. R. Rosenbaum / D. B. Rubin: The central role of the propensity score in observational studies for causal effects — D. B. Rubin: Estimating causal effects of treatments in randomized and nonrandomized studies — P. R. Rosenbaum / D. B. Rubin: Constructing a control group using multivariate matched sampling methods that incorporate the propensity score — P. R. Rosenbaum / D. B. Rubin: Reducing bias in observational studies using subclassification on the propensity score — J. D. Angrist & al.: Identification of causal effects using instrumental variables — D. B. Rubin: Bayesian inference for causal effects: the role of randomization — D. B. Rubin: Estimating causal effects from large data sets using propensity scores — D. B. Rubin: Assignment of treatment group on the basis of a covariate — P. R. Rosenbaum: From association to causation in observational studies: the role of tests of strongly ignorable treatment assignment — G. U. Yule: Notes on the theory of association of attributes in statistics — E. H. Simpson: The interpretation of interaction in contingency tables — C. R. Blyth: On Simpson's paradox and the sure-thing principle — S. A. Julious / M. A. Mullee: Confounding and Simpson's paradox — C. R. Charig: Comment on: 'confounding and Simpson's paradox' — W.S. Robinson: Ecological correlations and the behavior of individuals — T. D. Cook / W. R. Shadish: Social experiments: some developments over the past fifteen years — R. M. Baron / D. A. Kenny: The moderator-mediator variable distinction in social psychological research: conceptual, strategic and statistical considerations — **Volume 4:** N. Cartwright: Causal laws and effective strategies — J. L. Mackie: Causes and vonditions — D. Lewis: Causation — D. Lewis: Causation — D. Lewis: Causation as influence — S. Lieberman: Small n's and big conclusions: an examination of the reasoning in comparative studies based on a small number of cases — H. L. Costner: Utilizing causal models to discover flaws in experiments — D. A. Freedman: Statistical models and shoe leather — D. A. Freedman: From association to causation via regression — P. Meehl: Nuisance variables and the ex post facto design — P. E. Meehl / N. G. Waller: The path analysis controversy: a new statistical approach to strong appraisal of verisimilitude.
