# List of Figures and Tables

## Introduction

Figure 1.	View of the Temple of Apollo (6th century BCE), Ancient Corinth, Greece.....	x
Figure 2.	View across the East Terrace toward the colossal podium of the gods, Nemrud Dagı, Türkiye (1st century BCE) .....	xii
Figure 3.	Left: Temple B700 pylon (7th century BCE), Jebel Barkal, Sudan. Right: <i>Mastaba</i> 2110 of Nefer (4th Dynasty), western cemetery, Giza, Egypt. Digital reconstructions.....	xiii

## Chapter 1

Figure 1.1.	An archaeological excavation.....	5
Figure 1.2.	One future of excavation showing recording and documenting on handheld devices as every step of the fieldwork proceeds .....	7
Figure 1.3.	Photomodeling excavated features and displaying them in virtual reality as the dig proceeds; sample image from the REVEAL software package .....	8
Figure 1.4.	Photomodeling excavated objects and placing them in virtual worlds showing their original contexts; sample image from the REVEAL software package.....	8
Figure 1.5.	REVEAL; a free and open-source software toolkit for archaeological fieldwork recording, documentation, and automated interactive 3D model generation.....	9
Figure 1.6.	Fictional future Wicus excavation online portal.....	10
Figure 1.7.	Typical archaeological site as a difficult-to-digest disorderly scene of holes in the ground and scattered unorganized or unidentified stones .....	11
Figure 1.8.	Collegial live chat inside a virtual world .....	13
Figure 1.9.	Storylines.....	16
Figure 1.10.	An example of augmented reality .....	16
Figure 1.11.	Left: Ciriaco d’Ancona’s drawing of the Parthenon, Athens, Greece, c. 1430s. Right: Drawing of the Erechtheum, Athens, building inscription, original c. 409/8 BCE .....	19
Figure 1.12.	Early archaeological site documentation (the Temple of Athena Nike, Acropolis, Athens). Left: photograph by J. Kuhn c.1875–1900. Right: pen and pencil drawing completed in 1890 by John Pentland Mahaffy .....	20
Figure 1.13.	Virtual heritage, the early years. Left: 1993–1994, digital reconstruction of the Fortress of Buhen, Egypt/Nubian border, c.	

	2100 BCE. Right: 1994–1995, digital reconstruction of Stonehenge, England, c. 2000 BCE.....	20
Figure 1.14.	Photograph and plan from a typical excavation.....	21
Figure 1.15.	Interior and exterior renderings from the virtual world of the house shown in Figure 1.14 .....	22

## Chapter 2

Figure 2.1.	Grand portico of the Temple of Philae, Egypt, 1848. Lithograph by Louis Haghe.....	24
Figure 2.2.	General view over the ruins of the Temple of Jupiter, Baalbek, Lebanon, 1848. Engraving by Lemaitre .....	24
Figure 2.3.	Statue of Gudea of Lagash with a temple plan on his lap .....	25
Figure 2.4a–d.	Samples of ancient Egyptian, Assyrian, Greek, and Roman depictions of architecture .....	26
Figure 2.4a.	Egyptian garden – Tomb of Ipuy (19th Dynasty, 13th century BCE, Thebes); image painted by Norman de Garis Davies in 1924) .....	26
Figure 2.4b.	Assyrian battle scene – Northwest Palace of Ashurnasirpal II, Nimrud, Assyria (Iraq; c. 9th century BCE) relief panel B18-top, partial.....	26
Figure 2.4c.	Greek fountain house – detail from the François Vase (6th century BCE) .....	27
Figure 2.4d.	Roman villa decoration – detail from the <i>cubiculum</i> from the Villa of P. Fannius Synistor at Boscoreale .....	27
Figure 2.5a–b.	Reliance of architects upon the plans, sections, and elevations of antiquarian travelers working at the same time.....	31
Figure 2.5a.	Stuart and Revett drawings: an Ionic column from the Temple of Athena, Priene (Volume I, Chapter II, Plate VI); a caryatid from the porch of the Erechtheum, Athens (Volume II, Chapter II, Plate XVII); the Tower of the Winds, Athens (Volume I, Chapter III, Plate III); the caryatids porch of the Erechtheum, Athens (Volume II, Chapter II, Plate II) .....	31
Figure 2.5b.	St. Pancras New Church, London (1819–22), William Inwood and Henry William Inwood .....	32

## Chapter 3

Figure 3.1a.	Transfer engraving of the first photograph of the Propylaea, Athens, taken October 1839, by Pierre-Gustave Joly de Lotbinière .....	35
Figure 3.1b.	Engraving after one of the first photographs of the pyramid of Cheops, Giza, Egypt. Photograph attributed to Frédéric Goupil-Fesquet, taken 1839 .....	36
Figure 3.2.	Photomania c. 1840 .....	37

Figure 3.3.	Drawing of Layard in tunnels at Nineveh making his drawings of the remains .....	41
Figure 3.4.	View of the Temple of Maharakka (Hiéra-Sycaminos) photographed by Maxime Du Camp in 1850 .....	44
Figure 3.5.	Camera equipment of a Swedish portrait-daguerreotypist about 1850.....	45
Figure 3.6a.	Engraving after a photograph showing the excavations at the Serapaeum, Memphis, Egypt, undertaken by Auguste Mariette .....	47
Figure 3.6b.	Salted-paper photographic print taken in 1853 by John Beasley Greene showing excavations of the Valley Temple of Khafre, Giza, Egypt, led by Mariette .....	48
Figure 3.7	Photograph taken by Gabriel Tranchand in 1852 or 1853 with workers and showing Khorsabad city gate #3 (this is an oft-depicted view, with several different compositions).....	50
Figure 3.8.	Photographs by Augustus le Plongeon taken during his excavations in the Yucatan. Left: excavating a <i>chacmool</i> at Chitzen Itza in 1875. Right: a popular stereograph showing the façade of Temple V, Pyramid of the Magician, Uxmal, taken in 1876.....	56
Figure 3.9.	Petrie and his camera of his own design .....	58
Figure 3.10a.	Mohenjo-daro, Pakistan, wall of the citadel tower showing a thoroughly cleaned small architectural detail with rod scale .....	61
Figure 3.10b.	Harappa, Pakistan, revetment of the defensive wall showing a wider scale view of an excavation, also completely swept clean (extraneous bits removed from the foreground and background) and including a rod scale, but also natives to show the scale of larger architectural features .....	62

## Chapter 4

Figure 4.1.	Ivan Sutherland and his Sketchpad system .....	66
Figure 4.2.	Ivan Sutherland's Sword of Damocles, an early form of virtual reality headset .....	67
Figure 4.3.	WINSOM software solids model of the Old Minster, Winchester, England .....	71
Figure 4.4.	Two renderings output by William Riseman, Jr. Left: view extracted from the digitally reconstructed pylon of Temple B700, Jebel Barkal, Nubia (present-day Sudan), c. 650 BCE. Right: aerial view generated from the 3D computer model of <i>mastaba</i> 2010 (the tomb of the scribe Nofer), Giza, Egypt, 4th Dynasty, c. 2500 BCE .....	74
Figure 4.5.	Screen grabs from the Fortress of Buhen (Egypt, 12th Dynasty, c. 1850 BCE) virtual reality headset displays. Left: the interactive tourguide and the pop-up informational kiosk, which provides interactive access to supplemental maps, plans, photographs, and text. Right: the digital tourguide explaining wall reliefs .....	74

Figure 4.6.	Screen grabs from the church of Cluny, France, virtual world shown at the Imagina'93 graphics conference.....	77
Figure 4.7.	Screen grab from inside the virtual world of an ancient Egyptian temple, created by Carl Loeffler and Lynn Holden.....	79
Figure 4.8.	Learning Sites Virtual Museum exhibit booth at VRWorld '95 in Boston, showing the boom-mounted VR headset and associated graphics displays .....	81
Figure 4.9.	Screen grabs from one of the first Learning Sites virtual worlds depicting a reconstruction of Temple B700, Jebel Barkal, Nubia (present-day Sudan; c. 650 BCE). The images show roughly a progression seen by viewers of the virtual world.....	83
Figure 4.10.	Screen grabs from several of Learning Sites early virtual worlds in which we worked with field teams to provide innovative interactive visualizations. Top left: Poggio Colla, Italy. Top right: reconstruction of a then newly excavated ancient house at al-Meragh, Sudan (4th c. BCE). Center left: preliminary layout for the interactive excavation report of the site of Tsoungiza, ancient Nemea, Greece (Neolithic to Bronze Age). Center right: reconstruction of Temple B300, Jebel Barkal, ancient Nubia (present-day Sudan; 680s BCE). Bottom: early version of our reconstruction of the Northwest Palace, Nimrud, ancient Assyria (present-day Iraq; 9th c. BCE) .....	90
Table 4.1.	A comparison of similarities over the chronological development toward acceptance into the discipline of archaeology of both photography and interactive 3D computer modeling (virtual worlds)...	96

## Chapter 5

Figure 5.1.	Views of the various vegetal column and capital motifs used by Imhotep at Saqqara.....	106
Figure 5.2.	Late 19th-century cast-iron facades designed and molded to look like stone. Top: the Zion's Cooperative Mercantile Institution department store cast-iron facade constructed in 1876; Bottom: the building at 427 Broadway (also known as 43–45 Howard Street), in the SoHo neighborhood of New York City, was built in 1870–71 as a warehouse and was designed by Thomas Jackson in the Venetian Renaissance style, with French Renaissance details, all in cast-iron.	107
Figure 5.3.	Early applications of Formica. Left: Formica advertisement showing the ideal kitchen of the 1950s with wood-grained laminate counters and cabinets. Right: 1940s Alvar Aalto table, for the Thonet furniture company, with wood-grained Formica top .....	108
Figure 5.4.	Screen grab from an early CAD program.....	109
Figure 5.5.	Comparison of a photograph by Maxime du Camp (left) taken c. 1849–50 and a nearly contemporary drawing by John H. Allan (right)	

	created 1843 of the ruins of the Temple of Hermentis (also known as Hermonthis; present-day Armant, Egypt).....	111
Figure 5.6.	Comparison of an early visitor's drawings of remains at the sanctuary atop Nemrud Dagi (1st c. BCE, Türkiye) and of screen grabs from the first virtual reality digital reconstruction of the same site.....	113
Figure 5.7.	Hand-rendered reconstructions by James Fergusson of ancient Nimrud, Assyria.....	114
Figure 5.8.	Late 20th-century renderings output from 3D computer models and virtual worlds crafted to resemble traditional hand-drawn renderings for publication, public relations, and television broadcast. Top: Temple B700, Jebel Barkal, Nubia, present-day Sudan. Middle right: House A, Tsoungiza, ancient Nemea, Greece. Bottom: West Terrace sculpture group from Nemrud Dagi, Türkiye.....	115

## Chapter 6

Figure 6.1.	Archaeology in a nutshell .....	125
Figure 6.2.	Sample renderings extracted from 3D photomodels built from images shot by a DJI Phantom Vision+ drone at Jebel Barkal, Sudan (December 2014).....	128
Figure 6.3a-b.	Left: An image of a young woman generated by StyleGAN, an generative adversarial network (GAN). Right: Screen grab from Soul Machines showing a digital human introducing keynote speakers at a conference.....	131
Figure 6.4.	Screen grab from the first Project Buhen virtual world with its interactive tourguide and pop-up information kiosk, and, to the right of the rendering, the original schematic layout for the data kiosk .....	138
Table 6.1.	Building a multipast virtual world .....	139
Figure 6.5.	Screen grab from an iteration of the Jebel Barkal (Sudan, ancient Nubia) virtual world .....	145
Figure 6.6.	One example of a possible multipast portal.....	151

## Preface

My journey into virtual heritage was probably no more circuitous than most life trajectories. Its account, nevertheless, might serve well those who decide early on just how their life will unfold, only to find unexpected tangents and frustrating delays yield finally to a future unimagined, yet equally fulfilling. This introductory recounting is necessarily abbreviated, with many adventures omitted, but included here as it may provide insight into and context for the choices, points of view, and connections that comprise the bulk of this resource.

I recall it being in the 5th grade (but it may have easily been the 6th) when I first became aware of and interested in ancient history. It no doubt must have been the pyramids. To study archaeology, sift through 4000-year-old soil, and travel across foreign lands became imagined life pursuits (not yet full-fledged passions, other than one manifestation in a rather substantial hole in my family home's backyard). Still, during those formative years, it all seemed whimsically distant and unattainable. Years of education passed. At some point late in high school, results of the Kuder Preference Test strongly hinted that my career path would best be paved via the profession of architecture. Who was I to say otherwise. Off I embarked for a five-year stint in Cleveland studying architecture. Those were the turbulent, colorful, society-changing years of the late '60s and early '70s.

Radical changes were to affect me personally, as well. Time was spent (among other non-academic social activities) learning traditional skills and subjects, such as structural engineering, design, and drafting, along with a modicum of electives including symbolic logic, geology, and architectural history. The set of courses encompassing that last subject began with an archaeological exploration of early buildings; a first tantalizingly detailed glimpse into the ancient world. An old-school erudite teacher stood at the head of those classes, of which I took several throughout my undergraduate tenure. I do not recollect being exceptional, but I did pretty well grade-wise, expressing (during school and during private chats with the professor) not a little inclination toward Antiquity. Something in my questions or persistence (certainly not entirely in my GPA) led Prof. Henry S. Robinson, upon nearing my graduation with a Bachelor of Architecture degree, to ask if I might be interested in being his field architect in Greece, excavating the pre-Classical site of Ancient Corinth (Figure 1).

Seriously? I was dumbfounded; no, I was beyond elated. Who had leaked the contents of my crystal ball? Travel far away to an exotic land in the heart of the ancient world, participate as a staff member in an archaeological excavation, apply my newly honed architectural skills, AND get paid for it! Such a dramatic turn of events could not be ignored. It must be embraced, excitedly and with abandon, which it was. Not until my plane was descending into the Athens airport did it strike me that I didn't speak

Figure 1. View of the Temple of Apollo (6th century BCE), Ancient Corinth, Greece.  
© 1972 Donald H. Sanders.

Greek (despite hours of page-turning through a handy little Berlitz language guide); I was traveling in a really foreign country alone for the first time; and I had no inkling about how an archaeological dig worked or what duties I was expected to perform. Mr. Robinson, as he was always called throughout our eventual nearly 20 years of professional and personal engagements, graciously provided me with instructions on how to travel from Athens to Corinth, the names of associates in Corinth, and a whole month during which I was to train before his fieldwork began.

Summertime in a small, quaint, off-the-beaten track town of Old Corinth wandering through 2500-year old ruins was perfectly glorious....for all of a few weeks. This narrative was to avoid distracting sidebars no matter how otherwise illustrative, but before Mr. Robinson could arrive, near the end of my initiation into the vagaries of fieldwork, the building in which I (along with several other excavators, students, and administrators) had been housed burned to the ground in the middle of the night (the great Corinth fire of 1972). Save for my glasses and pajamas, I lost *all* my belongings. Everything. Welcome to your first archaeological dig Mr. Sanders. And just like that, all physical connections to my old life vanished. I adapted to the precarious and tenuous nature of things, as well as life in an alien culture. Thereafter, the summers in Greece proceeded well. Although I continued to toil distractedly in architectural

firms during non-excavation months, my mind flitted elsewhere, tilting more and more toward favoring the dirt over the drafting table as the location of my vocational inclinations, despite Mr. Kuder's predictions.

In order to become a recognized archaeologist or, as in the case of my new focus, a professional field architect, one needed a doctorate proving one's worthiness to the discipline (classroom instruction passing along knowledge and insight to new generations is another of the discipline's unspoken requirements). Solitary architectural skills (drafting, surveying, envisioning the built environment in three dimensions) were deemed insufficient, if not somewhat insignificant. Seeking the expansion of my expertise led to additional fieldwork experience in the, even more exotic, deserts of Saudi Arabia, a brief graduate student stint and brush with anthropology at Harvard University, and eventually a PhD in archaeology with a minor in Gothic architectural history from Columbia University. The grand and somewhat intense seven-year New York City exposure to scholarship blended studies of multiperiod architectural history with archaeological theory and critical thinking, not to mention the machinations of departmental politics. Occasional teaching stints were interspersed (I discovered that too many students simply could not visualize the wonders of the ancient world when seeing only plan drawings and photographs of stone scatters; too many students disengaged when talk of grand civilizations seemed predicated on a few seemingly trivial stretches of walls in dusty trenches; my architectural training had led me to see the ruins of Antiquity a bit differently). Summers were again spent gallivanting across parts of Greece, continuing to work in Corinth, and researching for the opus that would grant me the necessary credentials to ply my trades assisting or directing excavations (Sanders 1985).

Ply as such I would not. A new and very different challenge presented itself. Another type of credential generally considered a valuable asset in the eyes of archaeological peers is the publication. I spent the better part of the next decade gathering, researching, and coordinating the work and papers of one of archaeology's truly inspiring and pioneering women (Sanders and Gill 2004). Eventual publication of Theresa Goell's excavations at the mountaintop sanctuary of Nemrud Dagi, Türkiye, provided another beneficial career twist (Figure 2; Sanders 1996). During that same period, moving into late '80s and the early '90s, hierarchical vocabularies and an innovation called online databases enveloped my work and leisure times. The Age of the Internet was creating as many new problems for information access as it was solving; as many obstacles as opportunities. Thesaurus construction to the rescue.

When not cubicularly-enclosed, work for the J. Paul Getty Trust's Art & Architecture Thesaurus (for a long time, I represented the 'architecture' part of the AAT equation, while also occasionally tossing in pertinent archaeological parlance) meant innumerable visits to diverse library stacks, participation in art-, museum-, information science-, and architecture-related conferences, and engagements

Figure 2. View across the East Terrace toward the colossal podium of the gods, Nemrud Dagi, Türkiye (1st century BCE). © 1985 Donald H. Sanders

in sometimes contentious editorial meetings sorting through 100s of years of terminological turmoil so that we could organize the English language to make the new digital activities of database search and retrieval yield meaningful results (AAT 1994; <https://www.getty.edu/research/tools/vocabularies/aat/>; viewed August 10, 2022). We were changing the world (or, at least, how the new computerized world communicated) one word at a time. However, minds are meant to wander and mine began to envision a new digital landscape lush with colorful digitally generated 3D models of ancient architecture. Could software and room-sized computing machines really create a realistic visualization of, say, a Corinthian column capital, I wondered? Software companies, the MIT Media Lab, and architectural firms using newly developed computer-aided drafting programs unanimously uttered a collective negative. Rats.

Distractedly meandering past display booth after display booth, on assignment for the AAT at an architectural conference, my lexicographic lethargy cracked upon spying colorful renderings of Egyptian-looking structures. William ‘Bill’ Riseman, Jr., had indeed succeeded (despite the naysayers) in combining customized powerful desktop computers, personally tweaked leading-edge Hollywood-movie graphics software, and his own programming code to build colorfully detailed, 3D digital

Figure 3. Left: Temple B700 pylon (7th century BCE), Jebel Barkal, Sudan.  
 Right: *Mastaba* 2110 of Nefer (4th Dynasty), western cemetery, Giza, Egypt.  
 Digital reconstructions and images © 1993 William Riseman, Jr.; used with permission.

models of archaeological remains (Figure 3; the bizarre thing was that back during those summers spent toiling in architectural firms, 25 years earlier, I had worked in William Riseman Sr.'s office!). Much conversation ensued; a budding partnership emerged. Converging revolutions in teaching methods, online research resources, computer graphics technologies, and desktop-based interactive visualization code could now put 3D digital re-creations of global heritage of any time and place at anyone's fingertips (even beamed directly into one's eyes for an immersive near-first-person experience of faraway worlds, faraway spaces, and faraway times). It seemed that I and the world had come a very long way from trying to grasp the meaning of the remnants of past civilizations via static, two-dimensional, black-and-white plans and photographs.

Ensuing tragedy in the sudden death of Bill Riseman ([https://www.datacad.com/time\\_machine/1994/William\\_Riseman\\_Globe\\_Article.pdf](https://www.datacad.com/time_machine/1994/William_Riseman_Globe_Article.pdf); viewed April 3, 2023) plus triumph in the reconnection of programmers and curators spawned my founding of Learning Sites, Inc., in 1996, the oldest virtual heritage company in the world (<http://www.learningsites.com>; viewed August 10, 2022).

## Acknowledgements

Books normally ooze toward their final manifestation through collaborative effort. This volume could not have been completed without the valuable advice, supplementary information, and insight of Susanne Binder, Mirjam Brusius, Anna Garnett, Eben Gay, Geoff Kornfeld, Mark F. Madura, Peter der Manuelian, Silke Grallert, Timothy Kendall, Stefanie Klamm, Julian Edgeworth Reade, [the late] William Riseman, Jr., and Francesca Rochberg. To all of whom, I express my thanks for their contributions.

My substantial thanks go to Elma Sanders for her tireless and pointedly astute editorial efforts, comfort, and encouragement.

And thank you to Archaeopress (especially to David Davison) for finding my ideas worthy of publication.
