Introduction: Bodies of Knowledge in the Late Renaissance 1

- 1 Following Galen to Find the Seats and Causes of Disease 7
- 2 Disease Displayed in Private, Public, and Clinical Anatomies 18
- 3 Reconstructing Intellectual Microcosms 24
- 4 Pedagogy and Practices 26
- 5 Making Medicines from Books, Gardens, and Chymistry 35
- 6 Experience, Empiricism, and Experiment 39
- 7 Plan of Chapters 49

1 Contexts for the Medical Curriculum 55

- 1 Medicine for a Young Republic in the 1575 Founding 56
- 2 University, City, State 59
- 3 The Harvest of Trials from Earlier Sixteenth-Century Academic Medicine 65
- 4 Experience and Experiment in Early Leiden Mixed Mathematics and Engineering 68
- 5 The Humanist, Practical Education of Medical Professors 74
- 6 Early Medical Curricula 82
- 7 Conclusions 85

2 Ideals of Learning and Reading 87

- 1 Ideals of Curing Bodies by Reason and Experience 88
- 2 The Virtues of Disputation for Learning and Exams 95
- 3 Study Guides for Sharpening the Ingenium (Wit) of the Brain 99
- 4 Student Life and the Vices of Embodied Learners 109
- 5 Conclusions 111

3 Lecturing about Philosophical Bodies 113

- 1 Core Philosophy and Theory 115
- 2 Basic Principles vs. Hope for Certainty 129
- 3 Galen on Faculties, Matter, and Souls 133
- 4 Galen among Ancient Sources on “Powers” or Faculties 138
- 5 Early Modern Medical Discussions of Faculties 149
- 6 Conclusions 160

- 4 **Learning to Make Medicines: Reading, Viewing, Tasting, and Testing** 165
 - 1 Fire and Transmutation 169
 - 2 Chymical Teaching in the Lecture Hall 176
 - 3 Cultivating Knowledge and Medicinal Simples in the Garden 185
 - 4 Naturalists Knowing Plants by Experience and Experiment 193
 - 5 God's Medicines and Models of Making Trials 199
 - 6 Galen's Models for Knowing Drugs and Making Trials 207
 - 7 Medieval and Early Modern Debates over Sensing and Knowing Medicinal Faculties 219
 - 8 Making and Knowing Medicines with Johannes Heurnius' *New Method* 229
 - 9 Conclusions 235

- 5 **Knowing and Treating the Diseased Body** 240
 - 1 The Malfunctioning Seats of Diseases 247
 - 2 Seats of Diseases after Galen 257
 - 3 Knowing Material and Other Causes of Diseases 264
 - 4 Teaching Students to Treat the Faulty Part 273
 - 5 Localizing Diseases in Students' Disputations 288
 - 6 Conclusions 290

- 6 **Disease Displayed in Public and Private Anatomies** 293
 - 1 Anatomy Serving the Practice of Physicians and Surgeons 298
 - 2 Piety and Decorum 304
 - 3 Disease Displayed in Public and Private Anatomies 308
 - 4 Generation and Murder 315
 - 5 Cutting to the Causes of Disease and Death 321
 - 6 Conclusions 323

- 7 **Innovation and Clinical Anatomies** 326
 - 1 The Pulse Controversy and Anatomical Innovation 331
 - 2 Early Clinical Training and Anatomies 343
 - 3 Founding Regular Bedside Learning at the Hospital 345
 - 4 Causes, Histories, and Therapy Displayed in Diseased Bodies 348
 - 5 Diseases and Remedies from Across the Dutch Empire 352
 - 6 Tracking Diseases by Clinical Signs and Post-Mortem Evidence 355
 - 7 Making New Knowledge of Phthisis (Consumption) 364

8	Later Leiden Pedagogy and a New Theory of Phthisis	377
9	Conclusions	388

	Conclusion: A Microcosm of Medical Learning and Practices	395

Acknowledgments

I cannot begin without thanking Zoe Ragland, who was with me before all this started and is still at my side as it comes to a close. Researching and writing books takes hundreds of long days over many years. She has made every day so much better.

I thank my editor, Frank Huisman, and the staff at Brill for giving their guidance and help. Two anonymous reviewers went far beyond the usual scholarly duties to review the original manuscript, which encompassed what are now two long books. Their attention to the details and views of the larger story helped a great deal as I divided the manuscript, rewrote the introduction and conclusion, and made many changes and corrections. Of course, the remaining errors remain my own.

This book is unusual since it is not the revised version of my dissertation. Instead, it has largely been the work of three semesters on fellowship leave and many evenings, weekends, summers, and “break” periods between semesters. As I began revising my dissertation, I researched and wrote a new chapter about what came before the experimentalism of Leiden University medical education in the 1640s through the 1670s. I wanted to tell more of a story of change over time. The sources only seemed to multiply, and reading steadily through textbooks and then pulling threads here and there quickly unraveled my prior view based on the standard narratives about Galenic medicine. Following the leads of the sources through philosophical theory, making medicines, therapy, anatomy, and clinical practices took me to all sorts of new places. One chapter became three, then six, then seven. I think I have a better account of the “before” part of the story now.

Since this book did not build significantly from research support and advising during the dissertation process, further support played a vital role. A research and travel grant from the Institute for Scholarship in the Liberal Arts at the University of Notre Dame started the intensive research process. A further subvention from the Institute for Scholarship in the Liberal Arts at the University of Notre Dame supported the publication process. A generous fellowship from the American Council of Learned Societies was essential in providing a year on leave to research and write full-time. A later semester’s sabbatical gave me time to revise and extend the crucial chapters on medicines and knowing diseases. My initial dissertation research in archives in Europe received support from a National Science Foundation Doctoral Dissertation Research Grant, number 0750694, and a Scaliger Fellowship from the Scaliger Instituut at Leiden University. Some of my dissertation work has appeared in articles, which I cite in this book. That work received superb support from

the Chemical Heritage Foundation (now the Science History Institute) and a dissertation fellowship from Indiana University Bloomington. Of course, my education in the excellent History and Philosophy of Science and Medicine department at Indiana remains indebted especially to Nico Bertoloni Meli, Bill Newman, Jutta Schickore, and Sandy Gliboff. Arthur Field introduced me to the historiography of the Renaissance. Nico Bertoloni Meli started me on my research into Leiden medicine, and has provided advice and comments along the way.

Libraries and librarians should never be forgotten. The rare books staff at Leiden University supported my steady survey of hundreds of seventeenth-century medical disputations. Archivists at the Leiden Regionaal Archief and the Stadsarchief Amsterdam helped me to find useful sources. Further research with documents in the Sloane Collection at the British Library still yields rich finds. I always received quick and excellent assistance from the staff of the Rare Books and Special Collections at Notre Dame. I have received quite a few interlibrary loans in very good time from the staff at Notre Dame and lending libraries. The Bayerische Staatsbibliothek has been an invaluable online resource for research and images, especially during the COVID-19 pandemic. The staff of the Museum Boerhaave in Leiden helped me find essential, rare sources.

A number of audiences gave welcome encouragement, questions, and critiques. I thank especially colleagues at Cambridge University, the University of Minnesota, Indiana University Bloomington, Johns Hopkins University, Cedars-Sinai Medical Center, the University of Notre Dame, and the Max-Planck-Institut für Wissenschaftsgeschichte.

Colleagues at the University of Alabama Huntsville provided a beautiful community for my first full-time teaching job. At the University of Notre Dame, where I researched and wrote this book, I thank all the members of the Department of History and the program in the History and Philosophy of Science. Chris Hamlin has been my mentor, conversation partner, sounding board, co-teacher, and reader of drafts of some of the material here. I was a bit star-struck to call him a colleague; I am honored to call him a friend. Robert Goulding's expertise in Renaissance history of science, his excellent leadership, and his good cheer have been a steady help. Paul Ocobock has given much good advice and many pep-talks, usually when he least expected another visit. John Deak made my first years at Notre Dame much more welcoming. Dan Hobbins gave good advice and encouragement. Brad Gregory, as always, gave much to think about. Tawrin Baker and Phil Sloan helped to form a vital community of scholars of early modern medicine and life sciences. My department chairs, Jon Coleman and Elisabeth Köll, provided patient support and firm deadlines. I thank them both from my heart. Chris Hamlin and Bob Sullivan have been steadfast, wise, and humane advisors.

Away from Notre Dame, other scholars have provided vital engagement. I will always remember the late Harm Beukers for his patient advice in our meeting in Leiden years ago. His scholarship is a model of concision and mastery of the details. Dániel Margócsy always offered a warm welcome and excellent scholarship. Hal Cook gave good advice on parts of the second book and opened up the wider world of Dutch medicine. Saskia Klerk gave an excellent introduction to early modern Dutch pharmacology. Marieke Hendriksen showed me the importance of the later Leiden anatomical collections and the aesthetic dimension. Jole Shackelford gave helpful suggestions and pointers to things to read. Larry Principe, as always, was a sharp and warm interlocutor. Peter Distelzweig and Benny Goldberg continue to enrich my understanding of early modern philosophy and medicine. Richard Oosterhoff is an exemplary young historian who shows how to practice scholarship as friendship. Gideon Manning was a fine host and, as always, articulated incisive responses. Joel Klein shared his excellent work on Sennert and German chymistry. Matthew Gaetano is always a ready source of expertise on Aristotelian philosophy and early modern theology. There are many more people to thank for the second book, based on the dissertation. To those I have missed for this book: thank you, and my apologies.

Friends and colleagues have read parts of this book in various drafts. I thank especially R. Allen Shotwell for reading much and his ready, expert replies to email queries. Nico Bertoloni Meli, Matthew Gaetano, Tomàs Valle, and Eric Jorink all read significant amounts of earlier drafts and all gave valuable comments. I thank Tomàs Valle and Matthew Gaetano in particular for their persistence and keen editing. Nuno Castel-Branco shared his excellent work on Steno and gave comments on parts of this book. I also thank Arnaud Zimmern, Britta Eastburg-Friesen, Hannah Stevenson, and Zoe Ragland for reading parts of the final manuscript. I thank Britta and Zoe, especially for their eagle-eyed editing.

I wrote or revised much of this book at home, and quite a bit of it during the ongoing pandemic. Although I think it has some valuable things to say, and helps to keep home and hearth together, it has also tended to keep me from my children. I want to thank each of them—Charlotte, Josiah, Christopher, and Lucy—for their patience and impatience. I also want to mark clearly the joy they bring by existing. I am happy to say to them that the book is finally (nearly) done. The next is well on the way, too. My relatives and friends have provided encouragement and friendly inquiries. Claudia and Kevin Wood have helped the most and the longest. I also thank my mother and father for supporting my earlier education and raising me up.

At the end, as at the beginning, I thank Zoe most of all. Thank you.
