Handling "Occult Qualities" in the Scientific Revolution

Disciplines and New Approaches to Natural Philosophy, from John Dee to Isaac Newton

By

Xiaona Wang

BRILL

LEIDEN | BOSTON

Cover illustration: Detail from Isaac Newton's "Trinity College Notebook" Ms Add. 3996 (1661–65), "Quaestiones quaedam Philosophiae" fol. 1019; here he crossed out "Occult Qualityes" and replaced the title with "Philosophy." https://cudl.lib.cam.ac.uk/view/MS-ADD-03996/206. CC BY-NC 3.0.

Introduction 1

1 Re-disciplining "Occult Qualities": Mechanics and the Mixed Mathematical Sciences 12

- 1.1 Being "Skilled in 'Catoptrics'" 15
- 1.2 Testing a Body of "Astronomical Hypotheses" 29
- 1.3 Dismissing "Idle Imaginings" 38
- 1.4 Creating the "Unheard-of Paradox" 47

2 Manifesting "Occult Causes": Empirical Investigations and Experimental Philosophy 56

- 2.1 The Physician's Pathway 58
- 2.2 The Baconian Method 65
- 2.3 Occult Causes; Manifest Effects 71
- 2.4 The "Physico-Mathematicall-Experimentall" Programme 80

3 Employing the Occult Powers of the Lodestone and Orbital Motions 85

- 3.1 Gilbert's Magnetism 87
- 3.2 Magnetism and Gravity 93
- 3.3 Approaches to Orbital Motions 101

4 Exploring Hidden Qualities of Matter: "vis activa" 111

- 4.1 Matter Emits (Magnetical) Effluvia 113
 - 4.1.1 Petty's "Atomic Magnetism" 113
 - 4.1.2 Magnetic Effluvia and Spheres of Activity 120
 - 4.1.3 Boyle and Effluvia 128
- 4.2 Matter Vibrates and So Does Aether 134 4.2.1 *Boyle and Vibrating Matter* 134
 - 4.2.2 Hooke and Vibrating Aether 142
- 4.3 Matter Attracts and Repels 151
 - 4.3.1 Condensation and Rarefaction 151
 - 4.3.2 Light Physics 159
 - 4.3.3 The "Gassendians" 163

172

189

189

204

Conclusion 217

5 Reintroducing "Occult Qualities" into Natural Philosophy?

5.2 The Inimitable Newtonian Methodology: Dynamics

5.2.1 Orbital Motions, Comets, and Magnetism

170 Early Immersion in the Mixed Mathematical Programme

195

204

178

200

210

Newton's Approaches to Physics

5.1.1 Following Barrow 172

5.1.3 *De gravitatione* 185

5.2.2 De motu and Its Revisions

5.3.1 Interparticulate Forces

5.2.3 Routes to Universal Gravitation

5.3.2 *Concerning "Occult Qualities"*

5.3 Approaches to Physics and Active Principles

5.1.2 *The Science of Colours and Light*

Bibliography 221 Index 247

5.1

Acknowledgements

As with any first monograph, this work began life as a doctoral thesis while I was a PhD candidate at Edinburgh University (2014–18). I am very grateful to my supervisors, Thomas Ahnert and John Henry, whose erudite scholarship, patient guidance and invaluable feedback, all made it possible for the completion of my thesis and this book. I am also very grateful to the external examiner of my thesis, Rob Iliffe, for insightful comments and illuminating perspectives from which I have greatly benefited. The final shape of this book could not have been possible without the unfailing patience and encouragement of Christoph Lüthy, to whom I owe enormous thanks for his page-by-page comments.

Over the past couple of years, I have been particularly fortunate to have extremely delightful and friendly colleagues with outstanding scholarship. My conversation with them have been a great inspiration for my own work. I thank, at Edinburgh, Michael Barany, Stephen Bowd, Lawrence Dritsas, Ben Fletcher-Watson, Natalie Goodison, Dmitri Levitin, David McOmish, Richard Oosterhoff, Niki Vermeulen, Steve Yearley; and special thanks to Sergio Orozco-Echeverri, for his unwavering support for my research, comments on several early draft chapters, and valued company and reliable friendship. I am deeply grateful for the advice and feedback (for my thesis), in Berlin, from Maria Avxentevskaya, Lorraine Daston, Hansun Hsiung, Andrew Lea and Elaine Leong; at Wolfenbüttel, from Elizabeth Harding; in London, from Stephen Clucas, Jill Kraye, Sara Miglietti and Anthony Ossa-Richardson; and now at Warwick (for this book), from my postdoctoral mentor Michael Bycroft, and David Lines. I am also immensely grateful to Ofer Gal, Bernard Lightman and Wu Guosheng, whose encouragement has always meant a lot to me over these years.

My thesis and this book were also possible thanks to the generous support of the University of Edinburgh/China Scholarships Council Joint Scholarship (2014–17), The BSHS Butler-Eyles Fund (2017), the Writing-up Predoctoral Fellowships awarded by The Max Planck Institute for the History of Science (2018), Dr Günther Findel-Stiftung Predoctoral Fund from the Herzog August Bibliothek (2018), Francis A. Yates Fellowship from The Warburg Institute (2018), Susan Manning Research Fellowship from IASH, Edinburgh (2019–20), Society for Renaissance Studies Postdoctoral Fellowship (2019–20), The Science History Institute Short-term Fellowship (2021–22), and the Leverhulme Trust (2021–24).

I also wish to thank the editors of Brill (MEMPS). I could never thank enough Christoph Lüthy who read the whole manuscript at least three times;

Paul J.J.M. Bakker, Stefan Einarson, Theo Joppe, and Rosanna Woensdregt for their professional and patient assistance; and Brian Clarke for his suggestions on improving the text. I owe gratitude to the helpful comments of the anonymous referees on an earlier version of this book as well. All errors are my own.

My greatest gratitude is to my family and several close friends, especially to Marco, Pete, Raito, Reiko, Xiaolu and Xiaowei. I dedicate this book to my parents and to Cy Chen.
