1 Introduction and Overview of the Kabri Archaeological Project, 2013–2019 Seasons 1 Eric H. Cline, Alexandra Ratzlaff and Assaf Yasur-Landau

PART 1 Area D-West: the Iron Age Remains

- 2 Phase 11 Stratigraphy 19 *Meir Edrey*
- 3 Phase 11 Pottery 24 *Meir Edrey*

PART 2

Area D-West: the Wine Storage Complex and Earlier Remains

- 4 Phase III Stratigraphy 45 Alexandra Ratzlaff, Roey Nickelsberg and Brigid Clark
- 5 Phase III Pottery from the Wine Storage Complex 71 Matthew Susnow
- 6 Phases IV–V and Earlier Stratigraphy 100 Alexandra Ratzlaff, Roey Nickelsberg and Brigid Clark
- 7 Phases IV and V Pottery in Area D-West 111 Matthew Susnow
- 8 Statistical Studies of the Pottery in the Trash Deposits 138 Silvana Kreines
- 9 The Cypriot Pottery 150 Brigid Clark
- 10 Small Finds 168 *Tanya Sokolsky*
- 11 The Scarab 189 Daphna Ben-Tor

PART 3 Area dw-East

- 12 Stratigraphy 195 Alexandra Ratzlaff
- 13 Pottery from the Floors of DW-East 204 Matthew Susnow, Assaf Yasur-Landau and Meir Edrey

PART 4

Area L

- 14 Tomb 8050: Architecture and Remains 211 Brigid Clark and Erin M. Brantmayer
- 15 The Pottery from Tomb 8050 221 Matthew Susnow
- 16 The Cypriot Pottery from Tomb 8050 and Area L 227 Brigid Clark
- 17 The Small Finds from Tomb 8050 232 Tanya Sokolsky
- 18 Early Bronze Age Architecture 241 Brigid Clark
- 19 Early Bronze Age Pottery 248 Shira Albaz
- 20 The Scarabs 260 Daphna Ben-Tor

PART 5 Physical and Environmental Studies

- 21 Organic Residue Analyses from the Phase III Storage Rooms 267 Andrew J. Koh and Alison M. Crandall
- 22 Radiocarbon Dates for the Middle Bronze Age Palace: an Update 287 Felix Höflmayer and Sturt Manning
- 23 Ancient Wood Remains 298 Brita Lorentzen
- 24 Archaeobotany 310 Marco Nicolì

- 25 Stable Isotope Measurements on Seed Remains 318 Simone Riehl
- 26 Zooarchaeology 328 Ghavin Deonarain
- 27 Petrographic Analyses of Middle Bronze Age Ceramics 360 Paula Waiman-Barak
- 28 Evaluating the Hidden Extent of an Archaeological Site: an Example from Tel Kabri, Israel 364 Gilad Shtienberg, Assaf Yasur-Landau, Sariel Shalev, Naomi Porat, Polina Spivak, Simona Avnaim-Katav and Ruth Shahack-Gross
- 29 Micro-geoarchaeology 381 Roey Nickelsberg and Ruth Shahack-Gross
- 30 Earthquake Damage as a Catalyst for the Abandonment of Tel Kabri 389 Michael Lazar, Eric H. Cline, Roey Nickelsberg, Ruth Shahack-Gross and Assaf Yasur-Landau

PART 6 Conclusions

31 Thoughts on the Wine Storage Complex, Wine, and Feasting at Kabri 409 Assaf Yasur-Landau, Alexandra Ratzlaff and Eric H. Cline

Acknowledgments

We would like to thank once again Prof. Dr. Wolf-Dietrich Niemeier, former director of Tel Kabri, Prof. Dr. Manfred Bietak, and Dr. Malcolm H. Wiener, all of whom have extended enthusiastic support for the Kabri Archaeological Project (KAP) from its onset. During the years under consideration in this volume, from 2013 to 2019, our work at Kabri was made possible by grants from the Israel Science Foundation (ISF Grant No. 848/10, "мв Palatial Economy at Kabri" [A. Yasur-Landau]; ISF Grant No. 910/15, "Understanding Collapse: The Destruction of the Tel Kabri Palace" [A. Yasur-Landau and R. Shahack-Gross]); the National Geographic Society (2013 and 2019 [E.H. Cline]); Bronfman Philanthropies; and the Institute for Aegean Prehistory (INSTAP); with additional funding provided by the Columbian College of Arts and Sciences at The George Washington University, Brandeis University, the Bunting Foundation, and private donors,

including William and Melinda Becker, Joshua Eisen, Jeff Leach, Deborah Lehr, William and Rebecca Sanders, the Biblical Archaeology Forum (BAF), and the Biblical Archaeology Society of Northern Virginia (BASONOVA). Equipment was provided by Dr. Alon Shavit, while assistance in conservation and storage was provided by the Leon Recanati Institute for Maritime Studies, directed first by Professor Michal Artzy and then Professor Gil Gambash. We would also like to thank the people of Kibbutz Kabri, as well as the staff of the Western Galilee Field School and of Travel Hotel Gesher Haziv, where our team members stayed during these seasons. We are most grateful to all these institutions and people. We would also like to thank Heather Heidrich and Valerie Sebestyen, copy editors extraordinaire, as well as Inbal Samet, for all their hard work, as well as Katie Chin and Brill for their interest in this volume and their patience.

- 29.1 Infrared spectra representative of (a) the Phase III fill deposits and (b) sample from mudbrick Wall 2450, dominated by calcite (blue) and clay (red), with minor absorptions of quartz (green). The position of the main clay absorbance band at 1033 cm⁻¹, associated with presence of absorbance bands at 532, 912, 3621, and 3696 cm⁻¹, indicates the clay did not experience heat above 500°C (figure reproduced from Lazar et al. 2020: S2 Fig). Graph by R. Nickelsberg 383
- 29.2 Spectra from Phase IV sediments of the palace at Kabri showing a sample unaltered by heat (top) and a sample, 2609-14, exposed to heat of around 500°C (bottom). The absorbance band at 607 cm⁻¹ in the heated sample indicates the presence of carbonated hydroxylapatite (reproduced from Nickelsberg 2018: fig. 4.3). Graph by R. Nickelsberg 384

Tectonic setting of study area: (a) general map

30.1

showing the main tectonic features in the eastern Mediterranean. SoG = Sea of Galilee. CF = Carmel fault. DSB = Dead Sea basin. Location of Tel Kabri marked (reprinted from Darvasi and Agnon 2019 under a CC BY license, with permission from Copernicus Publications, original copyright 2019): (b) compiled map of faults in the Galilee area. Dark square shows location of Kabri, KF = Kabri fault (from Sneh et al. 1998 and Sharon et al. 2018 under CC BY licenses, with permission from the Geological Survey of Israel); (c) geological map of the area showing the mound of Tel Kabri and its associated potentially active tectonic fault (reprinted from Sneh et al. 1998 under a CC BY license, with permission from the Geological Survey of Israel). Lines mark different interpretations for the Kabri fault: black line after Sneh et al. 1998; dashed line after Sivan, Gvirztman, and Sass 1999; dark gray line after Bartov et al. 2009. Dots mark locations of the four springs in the vicinity of Tel Kabri. Rectangle marks the location of the study area shown in Fig. 30.2 390 Plan of Phase III. Circle indicates the location of an Iron Age pit; dashed line is the trace of the trench mentioned in the text. "L" indicates loci where sediment samples were collected for micromorphology and FTIR analysis; accompanying lines show the location of excavation profiles sampled. Arrows point to the warped floor in Room 2440 and offset walls of the Orthostat Building, which are aligned and parallel to the trace of the Kabri fault and to the trench. Note that structures located just south of the trench are misaligned with respect to the general trend of palace walls, with their northwestern corners rotated toward this feature (dashed arrows). Black star marks the approximate location of Fig. 30.6a. White star marks the approximate location of Fig. 30.6b. Gray stars indicate the location of images presented in Fig. 30.3. Dashed black rectangles show locations of Fig. 30.4 (the Orthostat Building) and Fig. 30.5a (the Wine Storage Complexes), while the smallest dashed rectangle marks the location of Fig. 30.5d. Plan by S. Pirsky 393

30.3 Field photographs demonstrating field sampling of bulk sediments. Left photo (Fig. 30.3a) shows Wall 2450 and its surrounding. The tags indicate bulk sample positions, with white superimposing lettering as follows: (a) mudbricks in the wall; (b) white plaster lining the wall; (c) fill deposits next to

the wall associated with several pithoi on the floor next to the wall. Note the white-speckled nature of the fill deposits, due to abundant plaster fragments. Right photo (Fig. 30.3b) shows sampling of block samples in Room 2520, with yellow superimposed lettering as follows: (a) Phase III floor; (b) ceramic walls of a storage jar lying on the floor and sectioned *in situ*; (c) fill deposit. Photos by R. Shahack-Gross 395

30.4

The Orthostat Building: (a) aerial view showing the main room (MR), back room (BR), and trench feature (F), denoted by dashed lines. The southern side of the trench is partially obscured by a large stone block, whose flat upper side would have once served as a threshold leading into the back room, but which has now collapsed into the trench. (b) back room (2411) covered in collapsed mudbrick and plaster; (c) step or displacement in the Orthostat Building floor, just inside the entrance. An offset orthostat is visible at the top of the image; (d) main room looking south and showing unbroken warped cross-walls-i.e., with a rise visible in the height of the walls. At the bottom of the image, Wall 2404 and the threshold leading into the back room are visibly collapsed and tilting into the trench; (e) back room cleared of all rubble, showing the broken and sloping plaster floor. Each section of the scale-sticks corresponds to 10 cm. Photo A by Griffin Aerial Imaging; Photos B-E by E.H. Cline 397

The Wine Cellar: (a) aerial view showing the 30.5 Southern Storage Complex (ssc), the Northern Storage Complex (NSC; dark, dashed box) and the trench feature (F; dashed white lines). Dark star marks the approximate location of Fig. 30.6a. White star marks the approximate location of Fig. 30.6b; (b) Room 2440 showing ~48 pithoi found in situ. Note the warping in the room's eastern wall (2441). (c) Room 2440 after being cleared of the pithoi; (d) displaced Wall 2443 in Room 2440. Photos A-B by Griffin Aerial Imaging; Photos C–D by E.H. Cline 398 Field photos of collapse into the trench: (a) looking 30.6 northeast at the collapse of Wall 2466 into the trench, which is now blocked by it; (b) Room 3306 of the Northern Storage Complex, left side of the image shows the trench while right side shows pithoi that appear to have rolled south toward the trench and the collapse of the plaster floor. Each section of the scale-sticks corresponds to 10 cm. Photos by E.H. Cline 399

30.2

Results of micromorphology analysis: (a) scan of 30.7 thin section of a mudbrick from a Phase III wall (sample кав-2450.5 in Table 30.3); (b) microphotograph of a Phase III mudbrick (sample KAB-2450.5 in Table 30.3); (c) scan of thin section of the fill deposit (5–11 cm) above the palace Phase III floor (sample кав-B2 in Table 30.3). The darker particles are pottery sherds; (d) microphotograph showing the general appearance of the fill deposit shown in (c); (e) field photo showing the Phase III plaster floor of Room 2553 and the fill deposit covering it; (f) scan of thin section of the contact shown in (e) (sample KAB-2603.13 in Table 30.3); (g) microphotograph showing the contact between the floor and sediment lying directly on it shown in (f). Photos by R. Nickelsberg 400 Infrared spectra of (a) representative sediment 30.8

sample of the Phase III fill deposits, dominated by calcite (black labels) and clay (light gray labels), with minor absorptions of quartz (medium gray labels); and (b) representative mudbrick sample from Wall 2450 showing higher amount of clay relative to calcite in comparison to the fill deposits, due to the presence of wall/ceiling plaster fragments in the former. The position of the main clay absorbance band at 1033 cm⁻¹ in both samples, associated with presence of absorbance bands at 532, 912, 3621, and 3696 cm⁻¹, indicates the clay did not experience heat above 500°C. Graph by R. Nickelsberg 401

Notes on Contributors

Dr. Shira Albaz

is an archaeologist and a post-doctoral researcher at the Leon Recanati Institute in the Department of Maritime Civilizations, University of Haifa. She holds a B.A., M.A., and Ph.D. in archaeology from Bar-Ilan University. Her research focuses on the Early Bronze Age material culture and societies in the southern Levant. She was part of the Tell es-Safi/Gath expedition as the supervisor of Areas E and S. In addition, she is the manager of the Tell es-Safi/Gath Archaeological Project at Bar-Ilan University and a member of the Minerva Center for the Relations between Israel and Aram in Biblical Times.

Simona Avnaim-Katav

received her Ph.D. in 2011 at the University of Haifa, Israel. She completed two pos—docs: 2012–2015 in the Institute of Earth Sciences at the Hebrew University of Jerusalem, Israel, and 2015–2017 in the Department of Geography at the University of California, Los Angeles. Since 2017 she is a researcher at Israel Oceanographic & Limnological Research institute. As a micropaleontologist, she utilizes her extensive world-wide taxonomic and ecological knowledge on recent and fossil foraminifera to decipher research questions involving geology, ecology, sea level, climate, and natural hazards studies.

Daphna Ben-Tor

received a B.A. in Archaeology and an M.A. and Ph.D. in Egyptology from the Hebrew University of Jerusalem. She was the curator for Egyptian archaeology at the Israel Museum, Jerusalem, from 1992 until her retirement in 2016. Her scholarly work focuses on Egyptian-Levantine relations in the second millennium BCE, with a special emphasis on Egyptian and Canaanite scarabs of this period and their political and cultural implications for both regions. She has published extensively on the subject and authored numerous catalogs for the exhibitions she curated during her work at the Israel Museum.

Erin Brantmayer

received a B.A. in History from West Virginia University in 2015 and an M.A. in Ancient Greek and Roman Studies from Brandeis University in 2018. She is currently a Ph.D. student at the University of Texas in Austin. Her research focuses primarily on how ancient populations interacted with their natural environments, predominately through religious interpretations of landscapes and geospatial and digital studies of natural resource exploitation.

Brigid Clark

is a Ph.D. candidate of Maritime Civilizations within the School of Archaeology and Maritime Cultures at the University of Haifa, where she also completed an M.A. in the same topic. Her research focuses on Bronze Age Mediterranean archaeology, Cypriot ceramics and chronology, and Cypro-Levantine maritime trade. Brigid has worked throughout the eastern Mediterranean, including at Hala Sultan Tekke, Erimi-Pitharka, Tel Kabri, and Dor-Yam.

Eric H. Cline

is the former chair of the Department of Classical and Near Eastern Languages and Civilizations and current director of the Capitol Archaeological Institute at The George Washington University. A National Geographic Explorer, NEH Public Scholar, Getty Scholar, and Fulbright Scholar with degrees from Dartmouth, Yale, and the University of Pennsylvania, he is an active field archaeologist with more than 30 seasons of excavation and survey experience in Israel, Egypt, Jordan, Cyprus, Greece, Crete, and the United States, including at Tel Kabri, where he serves as co-director. He is the author or editor of 22 books and nearly 100 articles; translations of his books have appeared in 19 different languages.

Alison Crandall

is an analytical chemist at Cambrex, a global pharmaceutical CDMO. She has bachelor's degrees in Chemistry and Classical Studies from Brandeis University, where she also completed her M.A. in Ancient Greek and Roman Studies in 2015. She has been a member of ARCHEM in varying capacities since her undergraduate thesis, studying everything from wine to metal alloys, and now serves as its assistant director. Her career has lent industrial rigor and expertise from both environmental and pharmaceutical analytical chemistry to further ARCHEM's transdisciplinary study of ancient materials and commodities.

Ghavin Deonarain

is a master's student at the University of Haifa, completing his thesis on the zooarchaeology of Tel Kabri. He has done extensive fieldwork in Europe, parts of Asia, and Australia, including Greece, Italy, Spain, and Israel, as well as all over the Eastern Seaboard of the United States. He is also currently an underwater archaeological technician for the cultural resources management firm R.C. Goodwin, located in the United States.

Meir Edrey

earned his Ph.D. in Near Eastern Archaeology from Johannes Gutenberg University, Mainz, Germany. He is the professional director of and research fellow at the Leon Recanati Institute for Maritime Studies at the University of Haifa, as well as an adjunct lecturer in the Department of Archaeology and Ancient Near Eastern Cultures at Tel Aviv University, and a post-doctoral fellow and adjunct lecturer in the Department of Maritime Civilizations at the University of Haifa. His research focuses on Phoenician culture during the first millennium BCE in the Orient and the Occident, dealing specifically with issues related to Phoenician terrestrial and maritime religion and cultic practices.

Felix Höflmayer studied Egyptology and archaeology at the University of Vienna and

received his Ph.D. in 2010. In 2009 he joined the Orient Department of the German Archaeological Institute, first in Amman, Jordan, from 2009 to 2011, and later in Berlin, Germany, from 2011 to 2013. He was the post-doctoral fellow at the Oriental Institute of the University of Chicago from 2013 to 2015. In 2015 he received an APART-Fellowship of the Austrian Academy of Sciences and returned to Vienna, Austria. He currently directs the research group "Archaeology of the Levant" at the Austrian Archaeological Institute of the Austrian Academy of Sciences, and, together with Katharina Streit, the Austrian excavations at Tel Lachish (Israel).

Andrew J. Koh

received his Ph.D. in archaeology (ancient history and chemistry) from the University of Pennsylvania after earning a B.S. in Biophysics/Classics and a master's in Biblical Studies. He is Associate Research Scholar in the Department of Near Eastern Languages & Civilizations at Yale University, working closely with the Yale Peabody Museum, and holds appointments at both the MIT Center for Materials Research in Archaeology & Ethnology and the Harvard Museum of the Ancient Near East. He founded ARCHEM in 2003 to support transdisciplinary approaches that seamlessly integrate the sciences and humanities, and has over two decades of field archaeology experience. In addition to director of ARCHEM, he presently serves as the co-director of the Southern Phokis Regional Project in Central Greece, motivated in part by an ongoing study of mainland interconnections with East Crete and the Levant during the dynamic Late Bronze-Iron Age transition in the eastern Mediterranean.

Silvana Kreines

received her B.A. in Classical Archaeology from Dickinson College. Following her graduation, she worked in Cultural Resource Management in the southeastern United States as an archaeologist and dive safety officer, as well as with non-profits Diving with a Purpose and the St. Augustine Lighthouse Archaeological and Maritime Program. She is currently completing her master's degree in Maritime Civilizations from the University of Haifa; her research focuses on a statistical and petrographic analysis of the ceramic remains in three trash deposits within the Bronze Age palace of Tel Kabri with the aim of connecting activity areas to various areas of the palace.

Michael Lazar

is a geophysicist and founding member of the Department of Marine Geosciences, Charney School of Marine Sciences, University of Haifa, Israel. His current research focuses on shallow geophysical applications, from neotectonics to archaeology and Holocene landscape evolution. Michael has also been a professional artist for over 20 years, combining the two worlds of art and science.

Brita Lorentzen

received a B.A. in Archaeology and Jewish Studies and a Ph.D. in Geological Sciences from Cornell University. She is currently an assistant professor in the Department of Anthropology and Director of the Tree-Ring and Wood Anatomy Laboratory at the University of Georgia. She is a paleoecologist and environmental archaeologist who uses dendrochronology, wood anatomy, dendrochemistry, and wider paleoecological methods to investigate humanenvironment interactions and their long-term impact legacies during the Anthropocene, with much of her fieldwork focusing on the environmental histories of Cyprus and the Levant.

Sturt Manning

received his Ph.D. from the University of Cambridge in 1995 after a bachelor's degree at the Australian National University and a master's degree from Macquarie University. He has been a research fellow at Jesus College, Cambridge, lecturer and then reader at the University of Reading, Professor and Walter Graham/Homer Thompson Chair in Aegean Prehistory at the University of Toronto, and is presently Distinguished Professor of Arts and Sciences in Classics and Director, Cornell Tree-Ring Laboratory, at Cornell University.

Roey Nickelsberg

is a Ph.D. candidate in the Department of Maritime Civilizations, University of Haifa, and holds an M.A., also in Maritime Civilizations, and a B.A. in Archaeology with a minor in Government and Politics from Ben Gurion University of the Negev. His research focuses on maritime archaeology in the eastern Mediterranean, examining ancient coastal settlement patterns, resource management, and trade networks though the combined examination of traditional archaeological finds and microarchaeological indicators. He has led several archaeological projects in Israel both on land and underwater.

Marco Nicolì

completed his B.A. in archaeological heritage and his M.A. in archaeology at the University of Salento (Italy). He is an archaeobotanist with an expertise in plant macroremains and a focus on the Mediterranean flora. He is currently a Ph.D. student at the University of Tübingen (Germany) and his doctoral research interests are in agricultural resources of southern Levant Bronze Age archaeological sites and their transformation and continuity in time.

Naomi Porat

received her Ph.D. from the Geology Department at the Hebrew University in 1989. She is a senior researcher at the Geological Survey of Israel. In 1994 she established the Luminescence Dating Laboratory, which she continues to run today. Her main research is in Quaternary geochronology, geoarchaeology, and applying luminescence to dating prehistoric sites.

Alexandra Ratzlaff

completed her Ph.D. in the Department of Archaeology at Boston University in 2014. Following a Fulbright post-doctoral fellowship at the University of Haifa and a National Endowment for the Humanities post-doctoral fellowship at the Albright Institute of Archaeological Research, she accepted her current position as Assistant Professor of Classical Archaeology and Digital Humanities in the Department of Classical Studies at Brandeis University. Her main research interests include Bronze Age archaeology of the Levant; Roman and Byzantine archaeology; maritime archaeology and trade; Hellenistic, Roman, and Byzantine ceramics; and the Roman army.

Simone Riehl

(Ph.D., University of Tübingen, 1998) is Senior Researcher at the Senckenberg Center of Human Evolution and Palaeoenvironment and Docent at the University of Tübingen, where she is Head of the Archaeobotany Unit at the Institute for Archaeological Science. Her research areas are the emergence and development of agriculture, paleoecology, and environmental archaeology of the Middle East using archaeobotanical and stable isotope methods. Riehl has worked as a project archaeobotanist in several archaeological excavations in the Near East, including Turkey, Syria, Lebanon, Israel, Jordan, and Iran.

Ruth Shahack-Gross

is a geoarchaeologist trained in both geology (B.S. and M.S., the Hebrew University of Jerusalem) and anthropological archaeology (M.A. and Ph.D., Washington University in St. Louis, Missouri, USA). Her research stems from questions related to human behavior, subsistence practices, human-environment interactions, and archaeological site formation processes. She is a professor at the Department of Maritime Civilizations, University of Haifa, where she directs the Laboratory for Sedimentary Archaeology, conducting research in coastal and marine archaeology through small-scale geoarchaeologically focused excavations at Tel Dor (Middle Bronze Age, Iron Age) and Dor South (Early Bronze Age). She is the author of about 100 articles.

Sariel Shalev

is a professor of Material Sciences, and more particularly, Archaeometallurgy. Shalev has a Ph.D. from Tel Aviv University and completed a post-doctoral position in the Department of Materials at Oxford. He has taught in the Departments of Archaeology and Maritime Civilizations at the University of Haifa and continues to be Adv. Scientist in the Faculty of Physics at the Weizmann Institute.

Gilad Shtienberg

is currently a Koret post-doctoral fellow at UC San Diego, where he specializes in the theoretical and practical aspects of the physical processes that occur in the everchanging landscape. His research interests include investigating complex human-environment interactions from prehistoric times to the modern period, while also gaining a unique perspective on social vulnerability to environmental changes. Shtienberg's studies rely on a multidisciplinary approach incorporating field surveys, borehole coring, sediment analysis, radiometric dating, and surface and subsurface remote sensing techniques. Integration of the produced datasets is performed through geographic information system platforms enabling a holistic, transdisciplinary understanding.

Tanya Sokolsky

is an archaeologist serving as the lab manager of the Laboratory of Coastal Archaeology and Underwater Survey (CAUS) at the University of Haifa. She received her M.A. in 2019 from the Department of Archaeology at the University of Haifa and specializes in Persian period terra-cottas along the southern Levantine coast.

Polina Spivak

has an M.A. in Archaeology from the University of Haifa. She works at the Israel Antiquities Authority and specializes in prehistory.

Matthew Susnow

received his Ph.D. in 2019 from the Department of Maritime Civilizations at the University of Haifa. He is currently a lecturer and post-doctoral researcher at the Institute of Archaeology of the Hebrew University of Jerusalem. Matt has been analyzing Kabri's MB pottery, including the pithoi, since 2015. His research is focused on Middle and Late Bronze Age ceramics, religion in the southern Levant, methodology in the identification of ritual in the archaeological record, social archaeology, and in general, the Bronze and Iron Ages in the southern Levant. He has engaged these and other topics in various publications, including his recent book (*The Practice of Canaanite Cult: The Middle and Late Bronze Ages*, Zaphon, 2021) and in numerous peer-reviewed articles.

Paula Waiman-Barak

is Head of the Laboratory for Ceramic Petrography in the Sonia & Marco Nadler Institute of Archaeology, Tel Aviv University. She is also the editor for Petrography of the Levantine Ceramics Project (LCP). Paula's specialty is Mediterranean archaeology in the Bronze and Iron Ages, with research questions related to Egypt, the Levant, Cyprus, and Greece. She has worked as a field archaeologist and ceramics specialist for 20 years, both on land at coastal sites and underwater. Paula is a highly skilled ceramic petrographer dedicated to studying provenance and technology with an eye toward questions of production and distribution.

Assaf Yasur-Landau

is Professor of Mediterranean Archaeology, Head of the Recanati Institute of Maritime Studies, the founder of the Laboratory for Coastal Archaeology and Underwater Survey and co-founder of the School of Archaeology and Maritime Cultures at the University of Haifa. He studies mobility, ancient economy, and human adaptation in the Mediterranean during the Bronze and Iron Ages. Currently he is co-director of the excavations of the Canaanite palace at Tel Kabri and of the underwater excavations at Tel Dor. He is the author of about a hundred articles and eight books and edited volumes, including The *Philistines and Aegean Migration in the Late Bronze Age* (Cambridge University Press 2010, 2014).
